

Afterres2050: prospective on the use of lands, in France, in the 2050 horizon

Will we be able to feed people, livestock, produce energy, construction material, molecules for green chemistry, within an area that is more and more rare and sought-after, while collectively taking up our commitments to contain climate change and to adapt to it, reconquer biodiversity, guarantee health for all through quality food? This is the set of questions that the « Afterres2050 » prospective study attempts to answer.

Evolution des différents types de production
